

Maximize Your Return On Investment

Threats from external forces, such as burglary, fire or even unauthorized employees, will always exist. But, you have the power to protect your assets with our safes and accessories featuring innovative designs and uniquely formulated materials. The Diebold Nixdorf LM Series safe deposit boxes ensures to maximize your return on safe deposit box services with enhanced locks and computerized key security.

Flexible Designs

Modular design pre-engineered for simplified installation and multiple size openings and sections provide the most efficient use of space.

Low Maintenance

Solid aluminum alloy doors with a textured powder coat finish. All surfaces are rust-resistant to maintain an impressive appearance.

Access Controls

UL-listed changeable double-nose key locks or optional single-nose locks for self-service environments.

Features

MODULAR SECTIONS

- Stackable interlocking sections in five sizes to accommodate most vault heights.
- Interlocking mechanism features interlocking clips at rear, guide pins at front and vertical side screws to attach adjoining sections.

CONSTRUCTION

- Welded area fabricated from galvanized steel.
- Plated front frame made of aluminum alloy material.
- Brass finish on hinges and lock noses.

LOCKS

- UL-listed double-nose lock features seven customer tumblers and seven guard tumblers, each side independently changeable.

NUMBERING

- Black numbering on brass-colored insert.

DOORS

- Low maintenance .5" (1.3 cm) thick on edge.
- Solid aluminum alloy with textured powder coat finish

System Options

KEYS AND LOCKS

Security and convenience are enhanced by fixed-renter, changeable-guard locks with computerized key security. Lock model number 175-70 is UL listed and includes seven tumblers and seven guard tumblers with brass finish.

Each side is independently changeable. A specially designed tool is provided with each LM Series Safety Deposit Box installation to ensure quick and accurate changing. Changing keys is done on site quickly and conveniently and does not require a service call. Using this special tool, the lock action is reset to fit a new key, making the box available immediately for a new customer.

LIGHTWEIGHT BOND BOX

Bond boxes are made of durable lightweight polypropylene which offers excellent durability, heat and impact resistance. Contoured corners won't cut fingers or scratch countertops. The latch requires positive pressure to release, minimizing the possibility of unintentional opening. Bond boxes are designed to carry 35 lbs. of contents.
